

Eurosash Standard C Double Glazed 1.5

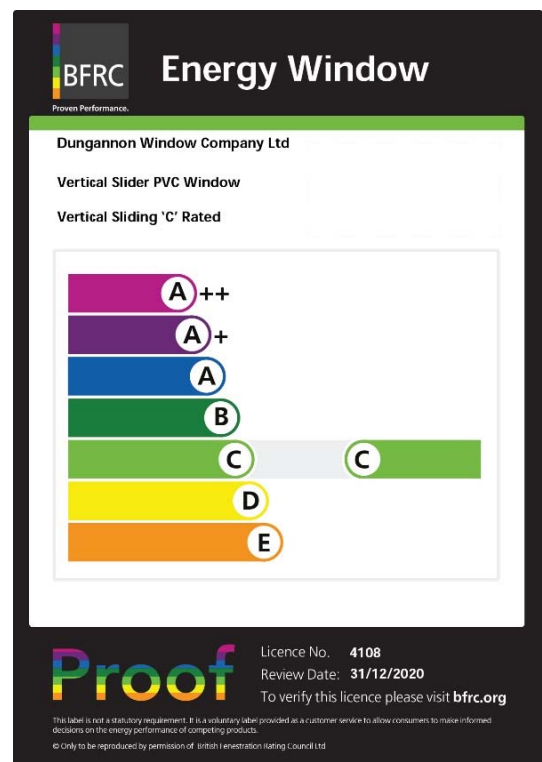

The **eurosash** Standard C 1.5 double glazed sash window is fully certified with the BFR (British Fenestration Rating Council). All **eurosash** windows are certified and we are audited annually to ensure compliance.

Eurosash C 1.5 includes Low-E (or Low-Emissivity) double glazing units with argon gas filled cavities and warm edge spacer bars to achieve low U-Values. Standard C 1.5 windows come with 'simplified' energy rating certificates, they are simply 'C' rated. The energy rating label does not show the U-Value, the solar factor or the air leakage, we can provide a letter or a full report showing all of these values if required.

All **eurosash** windows are fitted with our unique 12-part sealing system to ensure air-tightness.
